

Assignment Five: Developing a Web page using Notepad and video using Moviemaker

Due: 8:25am Tuesday, October 25, 2016

80 points

1. Using the instructions provided in the class, create a html document of the first page of your resume'. It must look exactly similar to your original resume'. The following points must also be taken into consideration:

a) – Place an image of yourself at the top of your generated resume”.

b) – ONLY use Notepad to generate the html document.

When you submit your report make sure to include the entire html document, original resume' generated with MS Word, and a screen capture of the browser page showing how your html document is shown by a browser.

2. Use the images you collected during development of your Tinker Cad project to create a tutorial explaining how to generate a design in Tinker Cad using Microsoft Movie Maker. Upload your images, then use Pan and Zoom selection of AutoMovie themes of the Movie Maker for creating videos. Record a narration of yourself explaining how it is done. You can use either “Record narration” feature of the Movie Maker or record it separately and add it to your project using “Add music” feature of the software but you have to make sure the sound and picture are in sync. Upload this video to your YouTube channel. In your report, explain how you did your project and include a screen capture of your project plus the link to the YouTube video.

Note: if your YouTube account is new, you will not be able to upload large files. To reduce the size of your video save it at smaller sizes.
